

List of recommended devices

The following list contains the telephone devices that have been tested by peoplefone on your systems. These devices are compatible with the systems listed below and can also be provisioned automatically (auto-configured).

Other SIP-compatible devices can usually be manually configured for use with a peoplefone SIP line. Please note, however, that we cannot offer support for manually configured devices.

If you use peoplefone HOSTED, we strongly recommend that you choose automatically configurable devices that are specifically certified for use with our platform. This ensures smooth integration and optimal support.

Please consider the product life cycle when purchasing new devices. Make sure that a device has not already reached end-of-life status or will reach it shortly after purchase.

Version: Oct 14,2025
